Company Number: 16145208

DB Rail Solutions Ltd

Environmental & Sustainability Policy

DB Rail Solutions Ltd (DBR) is aware that the civil, construction, and railway engineering industries, in which it provides specialist labour resources for project delivery, rely on materials that may be finite. The use and availability of these materials require careful consideration and management to meet present needs without compromising the ability of future generations to meet theirs.

DBR is committed to reducing the impact of its works, associated activities and processes have on not only the world-wide environment but also the environment in the locality of where work is carried out.

To this end DBR, will work towards the standards of BS EN ISO 14001 Environmental Management to achieve continual improvement in environmental performance and improve sustainability.

To meet this commitment, we will undertake the following activities:

- Assess the impact of any project on the environment at the location where the work is to take place and reduce this impact
- Ensure compliance with relevant environmental legislation, regulations and guidance
- Manage activities to minimise carbon emissions into the atmosphere for example from plant / equipment / transport involved in the work, wherever possible.
- Prevent pollution and should this occur have plans in place to minimise the impact
- Improve waste management practices through careful assessment of requirements
- Reduce consumption of natural resources by re-cycling and using sustainable materials
- Minimise noise and other nuisances
- Use the 'supply chain process' to ensure prudent use of natural resources
- Continually monitor environmental performance by setting project / business targets
- Use resources (men, materials etc.) local to the site of work where applicable

The necessary personnel and financial resources (within the constraints of the project being undertaken) will be allocated to assist the company in meeting its environmental and sustainability objectives.

Employees will be given such information, training and instruction as necessary to emphasise their responsibility to the environment and sustainability.

Effective communication is fundamental to achieving these objectives; environment and sustainability will be discussed with employees at meetings / briefings. Suggestions on ways to lessen any detrimental effect of work activities on the environment and sustainability are welcome from all employees.

Objectives and targets aimed at improving our environmental and sustainability performance will be reviewed by the senior management team.

Organisations contracted to us are expected to share our commitment to effectively manage environment matters and sustainability and obtain a similar commitment from their employees and sub-contractors.

Environmental accidents / Incidents will be investigated to establish cause and measures taken to prevent recurrence.

DB Rail Solutions Ltd Environmental & Sustainability Policy

Management alone cannot achieve this policy; it needs the support and assistance of all, including contractors.

This policy will be reviewed at least every 12 months and updated as necessary.
